

# Be Ready

December 2022

It's been 33 months since we faced the COVID-19 pandemic and 21 months since we decided to take things into our hands and decided that **education must be continued, no matter the circumstances!**

This is the theme of the BeReady project — to build a strategic partnership for Digital Education Readiness in the field of STEM education, aiming to support secondary school teachers of STEM subjects in continuing their online teaching. We're glad that you, dear reader, are a part of that fascinating journey.

## Our Approach

We're trying to do more than just simply provide ready-made resources to the teachers. We're engaging them in the whole process and inviting them to design their own STEM projects and resources that are tried out with their students. As the project partners' activities show — it seems to work well!

## Partnership

Learn more about BeReady's partners:

- Warsaw University of Technology
- Università de Siena
- Edumotiva
- Universidade de Minho
- 23rd Gymnasium of Athens
- X LO im. Królowej Jadwigi
- Extrentao de Vila Mea
- I. I. S. CAVAZZI

## BeReady Handbook

Download our handbook that presents several available digital platforms and tools, as well as several exemplary stories and scenarios exhibiting solutions developed during challenging situations similar to those from the COVID-19 era.

## Let's stay in touch

Visit new BeReady website — we're be posting new information about the project and soon some details regarding the upcoming BeReady Conference held by Warsaw University of Technology should be revealed.
