

# Be Ready

May 2023

## The BeReady conference

It was an incredible journey with an incredibly fulfilling ending – our final conference, *Education in pandemic – lesson learned about online teaching*, is behind us. Over 150 students, teachers, and BeReady project partners met on Friday, April 28, 2023, at the Warsaw University of Technology Centre of Innovation and Technology Transfer Management, to discuss educational ideas on online education of STEM subjects and take part in workshops.

Topics we discussed:

- Digital technologies and educational resources for learning in remote settings
- Teacher skills upgrading
- Effective STEAM learning
- Maker movement
- Student motivations towards STEM subjects
- The role of education in the XXI century skills development...
- ...and much, much more!

Thanks to keynote speakers, authors of presentations, and workshop leaders we managed to present the best practices collected during the Covid-19 period and share them with our precious guests — high school students and teachers. We hope you enjoyed the event and feel ready to explore the various ideas on your own, and maybe share your knowledge with others.

Don't forget to download the revised version of  
**the BeReady handbook!**
